SUMMARY OF EXPERIENCE

Roice is an experienced geoscientist in the international petroleum industry with proven success in using, creating, and building new tools and processes for the hydrocarbon exploration industry. In 2008 Roice selected 6 professionals to join with him as founders of Dynamic Measurement, LLC (DML). He also formed a consulting company (W3D) and an exploration company (DRC) to utilize industry and proprietary tools and processes to explore for, develop, and produce hydrocarbons. As the initial founder of Landmark Graphics, Roice created a university program which placed advanced interactive interpretation systems in many universities worldwide to support research and teaching.

W3D Infinite GridSM Spatial Resume showing where Roice has worked.

CHRONOLOGY

Dynamic Measurement, LLC

Co-Founder/Manager

October 2008 - Present

DML was established to exploit an exploration idea of one of the Co-Founders. DML has an exclusive worldwide license to a type of remote imaging data not used for exploration before. DML has a U.S. methodology patent pending, and is preparing for filing international patents. DML has completed a proof-of-concept study with ConocoPhillips, and is currently seeking funding to develop a business build around R&D projects, AMI studies, as well as mineral lease ranking and purchasing.

Dynamic Resources Corporation

Finder/President

January 2001 - Present

DRC was established to integrate advanced exploration technologies from and with a NetWork of proven professionals as synergistic multidisciplinary teams for exploration or production projects within specified areas and utilizing proprietary tools and processes. The goal is to develop exploration opportunities where investors putting up 3/3rds of the investment retain 3/4ths ownership, so DRC and the NetWork retain 1/4th ownership in discoveries. Focus is on Gulf Coast geopressure pods, although opportunities have been identified in North Dakota, Illinois, Michigan, Colorado, Wyoming, Utah, Canada, Europe, and West Africa.

Walden 3-D, Inc.

Finder/President

May 1990 - Present

W3D is a consulting company and new company incubator. Focus is on geotechnical consulting and mini-urban design. W3D started Walden Visualization Systems (the first virtual reality service company for the oil industry), vPatch (providing web-based project management), Advanced Structures Incorporated (building space-frame, fabric, and advanced enclosures), HyperMedia Corporation (the first commercialization of a UNIX hypertext browser), and others. W3D did major seismic interpretation projects for Layton Energy, in Nigeria, in the United States, through the Texas Bureau of Economic Geology in Venezuela, in India, and other places.

Layton Energy

Senior Geophysicist

June 2008 – April 2010

Through W3D Roice performed interactive interpretation on 14 Gulf Coast 3-D seismic surveys, evaluated numerous exploration opportunities, and supported investor presentations. Two wells were drilled based on this work (both technical successes and one an economic success). Several hundred leads and prospects were developed. The ongoing agreement with Dan Layton is to retain an office at Layton Energy, to do geophysical consulting as required, and to help Layton sell the leads developed when doing the interpretation work for Layton Energy.

*Geophysical Development Corporation (GDC)
April 2004 – September 2007*

*Vice President Interpretation
– Business Development*

Roice was charged with opening the market for GDC in China, and building an integrated interpretation business. Major processing and interpretation projects were completed for Ji Dong (3700 B/D, largest find in China in 10 years), Tarim (130 BCM, 3rd largest gas field in Xinjiang), Da Qing, Xing Jiang, and Tuha Chinese Oilfields. As Product Manager for GDC's Tiles™ Studies in the Gulf of Mexico, his team built a new type of regional rock properties / AVO context study - designed to allow easy amplitude and AVO evaluation for a specific prospect. This includes introduction of d-TIPS (database Toolkit for Integrating Petrophysics and Seismic developed by Fred Hilberman), and SEG-Y geophysical rock property volumes created at regional scales, or to match the bins in a specific 3-D seismic survey.

*Continuum Resources International Corporation
September 1997 - August 2000*

Co-Founder

Roice merged Walden Visualization Systems with Energy Innovations to create the first commercial petroleum industry visualization theaters. The team designed software to read from any databases or file with spatial information and to integrate the displays as a 3-D virtual reality experience. Continuum established simultaneous display and interaction capabilities, demonstrating a collaborative London England, Perth Australia, and Houston Texas connection.

*The Global Basin Research Network
September 1992 - November 1994*

Co-Founder

Roice participated in Department of Energy study with Lamont-Doherty Earth Observatory of Columbia University, Cornell University, Louisiana State University, Woods Hole, Penn State, and other major universities on dynamic replenishment of the largest Pleistocene oil and gas field in the Gulf of Mexico. The GBRN consortium continued through 2005.

*HyperMedia Corporation
January 1991 - Present*

Co-Founder

The HMC team designed, built, and produced a UNIX, X-Windows, Motif, Client-Server hypertext engine used for major projects in The United States, Saudi Arabia, and New Zealand, including development of a process model for running the ideal oil and gas company.

*Landmark Graphics Corporation
November 1982 - September 1992*

Co-Founder

Roice designed the functionality of Landmark Graphics seismic interpretation software. The Landmark team created worldwide markets, with training courses and with technical support. As the only experienced end user at LGC, he participated in regional and detailed interpretation projects in The United States, Canada, China, Australia, Indonesia, and the North Sea with most of the major oil and gas exploration companies. He established Landmark's University Program, helping students and professors develop new technologies from Australia to Holland.

University of Houston's Allied Geophysical Laboratory (AGL)
University of Houston's Seismic Acoustics Laboratory (SAL)
January 1980 - November 1982

Co-Founder
General Manager

Roice managed the physical modeling facility at the SAL. He helped create and managed four new laboratories for studying vector processing, image processing, well logging tools, integration of all exploration activities, and wrote the book *New Technologies in Exploration Geophysics*.

Mobil Oil Corporation
July 1974 - January 1980

Geophysicist

Roice worked as an interpretation and acquisition geophysicist. He participated in regional and detailed interpretation projects as well as equity re-determinations in the Far East, South America, Europe, Africa, and The United States. For over a year he co-managed four land seismic crews and trained new hires in seismic acquisition.

Amoco Corporation and Pan American Corporation
Summer 1973 & Summer 1970

Assistant Geophysicist

Roice was a Summer Intern and Assistant Geophysicist in Denver. He worked on seismic acquisition and interpretation projects, including geological field work, doing noise tests for acquisition design, and setting up barge seismic acquisition on the Great Salt Lake.

EDUCATION

35+ years of industry experience.

Southern Methodist University (SMU) - 1981 MBA (Masters of Business Administration).

University of Utah - 1974 - B. S. Geophysics.

OTHER

- Published 185+ technical papers since 1973, an index of which will be supplied if requested.
- Co-organized 8 SEG Research Workshops.
- Honorary Membership GSH (Geophysical Society of Houston)
- Enterprise Award SEG (Society of Exploration Geophysicists)
- Active Member of AAPG, EAGE, GSH, HGS, SEG, and World Future Society
