

WVS Corporation

Vision

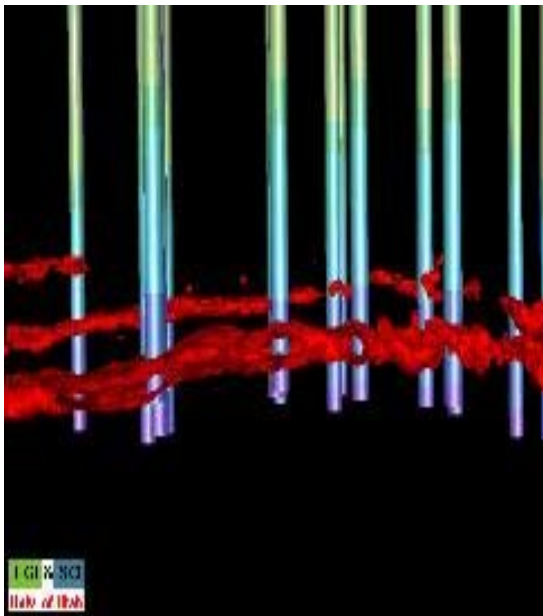

Simulating nature.

Mission

Provide immersive
virtual environments.

"Virtual visualization is the next generation of computer graphics. The resulting environments are so real the viewer becomes a participant 'in the world' rather than an external observer. Participants instantly think and interact with the spatial data as professionals in their field of study."

Keith Rawlinson,
Auckland, New Zealand

"Virtual Reality provides a natural interface connecting humans to data."

Bowen Loftin,
Virtual Environment
Technology Laboratory
